These are definitions for conditional lists of float objects for `stm latex` . It creates commands that only create lists in case the float object type is really used in the document. It is build upon the [totalcount](#) package.

Contents

| | |
|---|----------|
| List of Figures | 1 |
| List of Tables | 1 |
| 1. Usage | 1 |

|-----------------------------|---|

List of Tables

| | |
|----------------------------|---|
| 1. Example table | 3 |
|----------------------------|---|

1. Usage

1.1. Commands

There are standard L^AT_EX commands to create lists of float objects:

- `\listoffigures`
- `\listoftables`

Additionally it is possible to create a list of code listings with a macro from the [listings](#) package.

- `\lstlistoflistings`

The latter is currently only tested for the `stmlistings` package, which is based on `listings`. Please check the functionality carefully in case another package, e.g. `minted` is used.

By using this package a set of new commands is created:

- `\conditionallistoffigures`
- `\conditionallistoftables`
- `\conditionallistoflistings`

If these are used, the lists are only created, in case the specified float environments are really used in your document. Thus, it allows the creation of a standard preamble.

To properly create the lists, three compilation runs are required.

1.2. Options

Option *loadlistings* Set whether to load the [listings](#) package.

```
\usepackage[loadlistings=true]{stmglossaries}
```

`loadlistings=true` is the default and loads the package. It is used in case `loadlistings=false` is not set explicitly.

In case `loadlistings=false` is set, the command `\conditionallistoflistings` is not defined.

Option *newpage* Set whether to create a new page after each list.

```
\usepackage[newpage=true]{stmglossaries}
```

`newpage=true` is the default and creates a new page. It is used in case `newpage=false` is not set explicitly.

2. Example

This section contains examples.

2.1. Figures

This is an example figure.

Figure 1: Example figure

2.2. Table

This is an example table.

| Column 1 | Column 2 |
|----------|----------|
|----------|----------|

Table 1: Example table
